

Stir well before and during use.

Application temperature: Ideally 15-25°C. Do not use below 15°C or in conditions of high humidity.

Surface must be clean and dry.

Can be applied by brush or air-brush. If needed, the product may be diluted with a maximum of 10% water for application by air-brush. For extra hardness and water resistance, the product may be stoved. The coated article should be left to stand for 60 minutes or more to allow the water to evaporate prior to stoving. The schedule for stoving is 45 minutes at 100°C. After stoving the article should be allowed to cool to ambient temperature before the next coat is applied.

The coating is generally touch-dry within 30 minutes-1 hour, depending on the ambient temperature.

Articles may be re-coated after 1-2 hours.

Clean equipment immediately after use with water. If hard, use Rustins Cellulose Thinners. Once stoved, the product can only be removed with Rustins Strypit Paint and Varnish Stripper.

This container covers 3.5 sq.m 1 coat.

Coated articles can be handled 2 hours after the final coat, but will take 10 days to fully harden if not stoved. Restored articles may be kept clean with a warm water mild detergent solution. Dishwasher tests have been carried out on coated articles on a 'normal' 65°C wash cycle without detriment to the coating.

Artists dry powder pigments can be mixed with Acrylic Ceramic Glaze. Artist's acrylic colours can also be used but it is recommended that a test for compatibility is carried out because of the differences in manufacturer's formulations. Ceramic Glaze is compatible for use over some cellulose, epoxy, acrylic and oil based paints. Always test for compatibility first.

Also available in
1 litre and 4 litre
