PRODUCT DATA SHEET

Product	Italian Marble Polish
Type	Marble polish that produces crystallisation action between polish and marble, which is accelerated by buffing and temperature.
Intended Use	Polishing marble.
Special Features	It is not abrasive, but modifies the chemical nature of the marble itself, to produce a rich, long lasting sheen.
Preparation	Ensure that the area around the marble is covered to prevent splashing. Wear rubber gloves. Shake up the bottle to produce a milky white solution.
Application	For best results, work in small areas and buff up immediately after the polish has been applied. Using a damp cloth, apply approximately 100ml of polish per m ² , rub vigorously. Do not allow the surface to dry out. Although the liquid can be successfully hand polished off, we recommend the use of a low speed drill, with lamb's wool polish attachment. Wash off any residual polish with water and buff again.
Coats	Re-apply when required
Drying Time	Immediate.
Re-coating Time	Re-apply when required.
Application Temp.	Ideally between 15 – 25 degrees Centigrade.
Coverage	Approximately 100ml of polish per m ² .
Maintenance	Sheen can be maintained by regular wiping with a soft lint-free cloth.
Compatibility	With black marble, extra care must be taken to ensure the polish does not dry on the surface or misting will occur. Not suitable for synthetic marble.
Settlement	Shake well before use.
Shelf-life/Storage	2 years if stored unopened in a cool, dry place.
Hazards	Not classified as hazardous to user. Keep out of reach of children. Download full SDS from www.rustinsltd/hotspot or contact directly.
Clean-Up	Clean up with copious water.
Sizes	200ml bottle.
