

BRUMMER

THE PROFESSIONAL CHOICE

Fine Stoppings and Fillers Natural Wood Colour Guide

Match these shades to the predominant grain colour in untreated, planed wood. Newly sawn woods will change colour and should not be matched for a few days.

Yellow Label (interior) and Green Label (exterior) are available in all the colours shown below.
Black filler is available for interior.

	
Standard	Maple
	
Pine	Light Oak
	
Natural Oak	Medium Oak
	
Dark Oak	Beech
	
Light Mahogany	Medium Mahogany
	
Dark Mahogany	Light Walnut
	
Ebony	Teak
	
White	

For technical reasons connected with colour reproduction on printing machines, these shades may not exactly match the actual colours of the wood fillers. Technical information and colour matching advice is available on the website.
Always try a sample area first.

Wood is the most beautiful natural material and there are so many different types, each with their own colours and characteristics.

The timber from just one tree will have various shades so it is simply not possible to have a 'one size fits all' approach to colour matching, but our colour guide is the result of years of experience matching wood fillers to the most frequently used shades of different timbers.

This basic guide indicates which Brummer colours may be suitable for different types of wood. Naturally we can only match to the natural untreated timber and the colours we suggest are based on the predominant grain colour of a timber.

For larger customers, with very particular requirements, we are able to make specially matched colours, but these are subject to minimum order quantities.

For technical reasons connected with colour reproduction on printing machines these shades may not exactly match the actual colours of our stoppings and fillers. This chart is for guidance only and should not be considered definitive.

Always try a sample area first.

Key: A=American, E=European, J=Japanese, SA=South American

Wood	Brummer Shade
